

Acellus® In New Jersey...

St. Joseph's Preparatory School, Metuchen NJ

"I've been using Acellus in a freshman Algebra class for two years with students who scored in the bottom 25% of the Mathematics section of our school's admissions and placement test.

It is important that these students begin to experience success in Math. I've found that the thing that helps the most is for them to take the Acellus Fundamental Math course along with the traditional Algebra 1 course. This gives them a solid refresher in basic mathematical operations. They tend to move fairly quickly through the Acellus lectures, tests and exams, and they gain much needed confidence as well.

Although these students generally begin the semester performing below average in the traditional Algebra 1 course, by the end of the first quarter they're generally earning grades of 'C' or better. By first semester end, many of them are earning grades of 'B' or even higher. The other Algebra I teacher reports similar results – the students in her class who are also enrolled in Acellus improve significantly as the semester progresses.

Here at St. Joseph High School, we are pleased with the results we've been getting from Acellus. We plan to utilize it to an even greater degree and with greater effectiveness as time goes on."

Br. Kevin M. Finnegan, s.c.

Florence Township School District, Florence NJ

FLORENCE TOWNSHIP SCHOOLS AND ACELLUS, PERFECT TOGETHER

The Florence Township School District is focused on helping our students regain confidence as we integrate the Acellus program. This practical learning tool has helped our students build a strong foundation in math and science while they learn to access, integrate, and present information using technology as a tool for learning.

Dr. Louis G. Talarico,
Superintendent of Schools
