

# Quick Start for Acellus<sup>®</sup> 5

## Setting Up The Server On The Network

### Setting up the Acellus Server on your Network

The first step is to set an IP address on the Acellus server. If your students are going to be doing work from home, you can configure the server with a public IP address or forward a port from your internet router to port 80 on the Acellus server.

Begin by connecting your Acellus server to the network using the port shown in the diagram below and turn the server on. When the server is finished booting, its IP address will be displayed on the front panel.

Most school networks are using a DHCP server, and the server will obtain its IP information automatically. If you are not running a DHCP server on your network, the server will start with this default static IP address:

**192.168.199.254**

You may either reserve the DHCP address the server has obtained, or assign a static address using the front panel. To assign a static address, follow these steps:

1. Use the up and down buttons to the right of the front panel display to select an item from the menu on the front panel. Press the Set button when Network Settings is displayed.
2. Select the IP Address option and press the Set button. Then, use the up and down arrows to change the first part of the IP address, and the Set button to move to the next octet.
3. When you are finished, press Set to save the IP address, or Cancel to quit.
4. Repeat this process for the network mask and the default gateway.

### Important

Before your students can start using your new server, it needs to be entered into the Acellus system. To do this, please email the IP address to [coordinator@acellus.com](mailto:coordinator@acellus.com), or give us the address by calling 888-220-4020. If you have decided to make your server accessible from the internet, you will need to also provide the external address that can be used to access the server.

### Client Software Installation

Before Acellus can be used, the workstations must have the proper software installed. Acellus uses the features in HTML 5 to deliver audio and video. Because of this, no video player is required, but a browser that supports HTML 5 must be used. The browsers supported by Acellus 5 are:

1. Internet Explorer 9
2. Google Chrome
3. Safari

To make it easier for your students to log in, we recommend that you also set your browser's home page to one of the following locations:

<http://www.acellus.com>

<http://signin.acellus.com>

Alternatively, you may create a desktop icon for your students that takes them to one of the locations listed above.

### Customer Support

If you need additional assistance or installation instructions for another operating system, please refer to the online manual or contact the Acellus Support Center at 888-220-4020.

Thank you for choosing Acellus!
